MMRF Research Initiatives

1. MMRF Myeloma Accelerator Challenge (MAC) Grants

- Broad, multi-institutional research grants designed to advance clinical trial concepts in the areas of
 - High-risk newly diagnosed multiple myeloma (NDMM)
 - High-risk smoldering myeloma (SMM)
- Each research network will be funded up to \$10M over 3 years

2. MMRF Horizon Adaptive Platform Trials

- Paired with MAC grants
- Done in collaboration with 13 MMRC sites
- Trials in relapsed/refractory myeloma, high-risk NDMM, high-risk SMM

Hackensack, New Jersey

7

Bispecific Antibodies

Bispecific antibodies are also referred to as *dual-specific antibodies*, *bifunctional antibodies*, or *T cell-engaging antibodies*.

Bispecific antibodies can target two cell surface molecules at the same time (one on the myeloma cell and one on a T cell).

Many different bispecific antibodies are in clinical development; three approved for use in myeloma!

Availability is off-the-shelf, allowing for immediate treatment.

Cohen A et al. *Clin Cancer Res.* 2020;26:1541.
Singh A et al. *Br J Cancer.* 2021;124:1037.

8

Myeloma Cell Targets for Bispecific Antibodies

BCMA

- Highly expressed only on the surface of plasma cells
- Myeloma patients have significantly higher serum BCMA levels than healthy individuals

GPRC5D

- High expression on myeloma cells in the bone marrow
- Low expression on hair follicles but not on other healthy cells
- Expression on myeloma cells is independent of BCMA

FcRH5

- Selectively expressed on B cells and plasma cells

GPRC5D, G protein-coupled receptor family C group 5 member D; FcRH5, Fc receptor-homolog 5

9

Current State of Bispecific Antibodies

Target (MM cell × T cell)	Bispecific antibody	Status
BCMA × CD3	Tecvayli (teclistamab)	✓ Approved
	Elrexifio (elranatamab)	✓ Approved
	Linvoseltamab	Clinical studies
	Alnuctamab	Clinical studies
	ABBV-383	Clinical studies
GPRC5D × CD3	Talvey (talquetamab)	✓ Approved
	Forimtamig (RG6234)	Clinical studies
FcRH5 × CD3	Cevostamab	Clinical studies

Overall response rates 60% to 70% in heavily pretreated myeloma patients

High proportion of patients achieving VGPR or CR

GPRC5D, G protein-coupled receptor family C group 5 member D; FcRH5, Fc receptor homolog 5; VGPR, very good partial response; CR, complete response

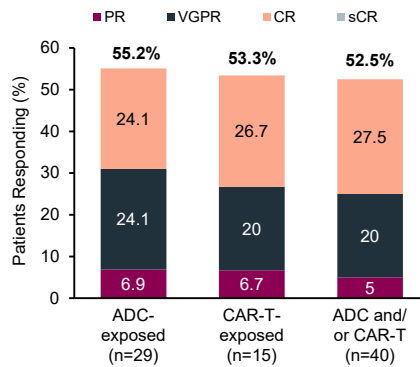

10

Tecvayli in Patients With RRMM

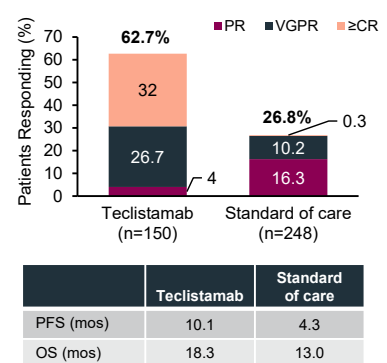

Tecvayli in patients *with no prior BCMA-targeted treatment* (MajesTEC-1 Study)¹

Tecvayli in patients *with prior BCMA-targeted treatment* (MajesTEC-1 Study)²

Tecvayli experience vs real-world clinical practice (LocoMMotion Study)³

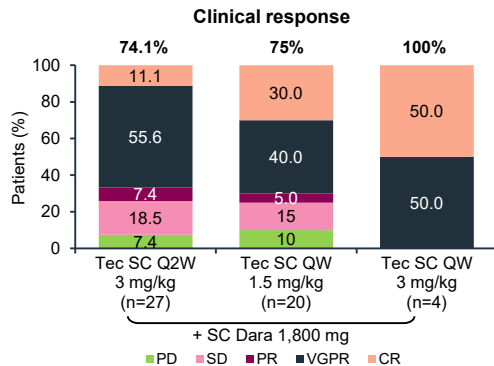

RRMM, relapsed/refractory multiple myeloma; ORR, overall response rate

1. Moreau P et al. *N Engl J Med.* 2022;387:495. 2. Touzeau C et al. *J Clin Oncol.* 2022;40. Abstract 8013. 3. van de Donk NWCJ et al. *J Clin Oncol.* 2022;40. Abstract 8016.

11

Tecvayli Combinations

Tecvayli + Darzalex in patients with 3 or more prior lines of therapy (TRIMM-2 Study)¹

Tecvayli + Darzalex + Revlimid in patients with 1–3 prior lines of therapy (MajesTEC-2 Study)²

Most frequent non-hematologic adverse events, %	Any grade	Grade 3/4
CRS	81.3	0
Fatigue	46.9	6.3
Infections (≥1)	90.6	37.5

PD, progressive disease; PR, partial response; SD, stable disease; sCR, stringent complete response

1. Rodriguez-Otero P et al. *HemaSphere.* 2022;6. Abstract S188. 2. Searl E et al. *Blood.* 2022;140. Abstract 160.

12

Real-World Experience With Tecvayli

Real-World Experience From 5 US Academic Centers,
Part of the US Myeloma Innovations Research Collaborative

Response (full cohort), %	RWE cohort (n=104)	MajesTec-1 (n=165)
ORR	66	63
CR or better	29	39.4
VGPR	17	19.4
PR	20	4.2
Minimal Response	0	1.2
SD	9.5	16.4
PD	24.5	14.5
NE	0	4.8

NE, not estimable; RWE, real-world experience

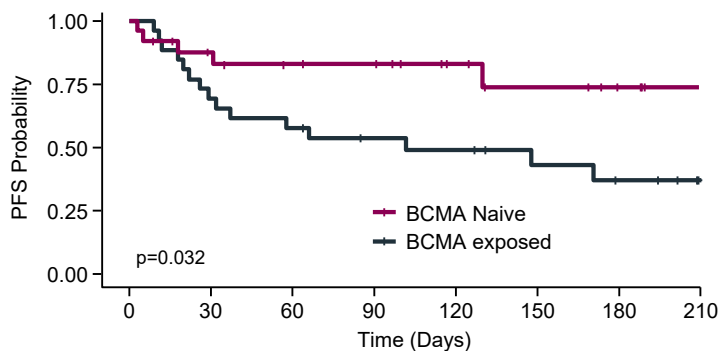

- Median PFS: 5.4 months
- Overall, Tecvayli was well tolerated with no major safety concerns despite worse performance status and cytopenias than the MajesTEC-1 trial population

Dima D et al. *Blood*. 2023;142. Abstract 652.

13

Impact of Prior BCMA Therapy on Tecvayli

- Single-center analysis of 72 patients receiving Tecvayli
- Compared to MajesTEC-1, patients were older, more heavily pretreated, and had a greater incidence of high-risk features

Firestone R et al. *Blood*. 2023;142. Abstract 333.

14

Horizon Adaptive Platform Trial

- Done in collaboration with the Multiple Myeloma Research Consortium (MMRC)
- Designed to rapidly test multiple agents simultaneously while evolving in response to clinical outcomes and scientific advances
 - Teclistamab or an investigational agent
 - Additional treatment options may be added at different times
- The goal is to identify the safest and most effective therapies for multiple myeloma patients, especially the 25% of patients in the high-risk category, where need is the greatest

clinicaltrials.gov/ct2/show/NCT06171685

15

Elrexio in Patients With RRMM

Efficacy and safety results with Elrexio (MagnetisMM-1 Study)¹

Elrexio in patients with no prior BCMA-directed treatment (MagnetisMM-3 Study)²

Elrexio in patients with prior BCMA-directed therapies (Pooled analysis of MagnetisMM studies)³

IMiD, immunomodulatory drug; PI, proteasome inhibitor

1. Bahlis N et al. *Nat Med.* 2023;29:2570-2576. 2. Lesokhin A et al. *Nat Med.* 2023;29:2259-2267. 3. Nooka AK et al. *J Clin Oncol.* 2023;41. Abstract 8008.

16

Elrexio in Patients With RRMM: MagnetisMM-3 Updates

Lower response rates in poorer prognosis groups were primarily driven by patients with ISS stage III

Response in subgroups	ORR (%) ISS I-II	ORR (%) ISS III
High-risk cytogenetics (n=31)	71.4	0
Extramedullary disease (n=39)	47.4	0
>50% BMPCs (n=26)	84.6	7.7
Penta-refractory (n=52)	63.6	0

BMPC, bone marrow plasma cell; ISS, International Staging System; PFS, progression-free survival OS, overall survival
Tomasson M et al. *Blood*. 2023;142. Abstract 3385.

17

Elrexio in Patients With RRMM: MagnetisMM-3 Updates

Most frequent adverse events, %	n=123	
	Any grade	Grade 3/4
Hematologic		
Neutropenia	49.2	49.6
Anemia	48.8	37.4
Thrombocytopenia	31.7	23.6
Non-hematologic		
Infections	66.9	47.2
CRS	57.7	0
ICANS	4.9	0
Diarrhea	44.7	3.3
Fatigue	33.3	4.1
Decreased appetite	33.3	0.8
Pyrexia	32.5	4.1
Nausea	26.8	0

ICANS, immune effector cell-associated neurotoxicity syndrome

Tomasson M et al. *Blood*. 2023;142. Abstract 3385.

- No new safety signals with additional follow-up

18

Linvoseltamab in Patients With RRMM: LINKER-MM1 Update

- Phase 2 of open-label LINKER-MM1 study: 200-mg expansion cohort
- Active MM per IMWG criteria: previous ≥ 3 lines of therapy and triple-exposed or triple-refractory disease (to ≥ 1 IMiD, PI, and anti-CD38 mAb)

IMiD, immunomodulatory drug; IMWG, International Myeloma Working Group; mAb, monoclonal antibody; PI, proteasome inhibitor; VGPR, very good partial response
Jagannath S et al. *Blood*. 2023. Abstract 4746.

19

Linvoseltamab in Patients With RRMM: LINKER-MM1 Update: Response

- Median time to \geq PR was 1 month, to \geq VGPR was 2 months, and to \geq CR 7.6
- In 10 patients with previous exposure to belantamab mafodotin, ORR was 70%
- Among 37 patients with CR/sCR and available MRD data, 50% had no measurable residual disease at 10^{-5}

Jagannath S et al. *Blood*. 2023. Abstract 4746.

20

Linvoseltamab in Patients With RRMM: LINKER-MM1 Update: Adverse Events

• Patients in 200-mg cohort received median of 35 weeks of treatment exposure (range: 1–137)

Nonhematologic TEAEs, %	Any Grade	Grade 3/4	Hematologic TEAEs, %	Any Grade	Grade 3/4
CRS	46.2	0.9	Neutropenia	38.5	37.6
Diarrhea	35	1.7	Anemia	38.5	30.8
Cough	34.2	0	Thrombocytopenia	17.9	14.5
Fatigue	32.5	0	Lymphopenia	12	11.1

Constipation	16.2	0	COVID-19	14.5	5.1
Pyrexia	16.2	0	Upper respiratory tract	12.8	1.7

AE, adverse event; CRS, cytokine-release syndrome; ICANS, immune effector cell–associated neurotoxicity syndrome; TEAE, treatment-emergent adverse event
 Jagannath S et al. *Blood*. 2023. Abstract 4746.

21

Alnuctamab in Patients With RRMM: Phase 1 Response and Adverse Events

Most frequent adverse events (%)	Any grade	Grade 3/4
Hematologic		
Anemia	47	27
Neutropenia	55	45
Thrombocytopenia	37	16
Non-hematologic		
CRS	56	0
Infections	62	16

Bar N et al. *Blood*. 2023;142. Abstract 2011.

22

ABBV-383 in Patients With RRMM: Phase 1 Response

- ABBV-383 is a BCMA-directed bispecific with a bivalent BCMA domain and low CD affinity
- Phase 1 trial with patients (n=220) who had previous ≥ 3 lines of therapy

Q3W, every 3 weeks; Q4W, every 4 weeks
 Jagannath S et al. *Blood*. 2023. Abstract 4746.

23

ABBV-383 in Patients With RRMM: Phase 1 Adverse Events

Non-hematologic adverse events	ABBV-383 every 3 weeks*						ABBV-383 monthly†	
	20 mg (n=32)		40 mg (n=55)		60 mg (n=61)		60 mg (n=21)	
	Any grade	Grade 3/4	Any grade	Grade 3/4	Any grade	Grade 3/4	Any grade	Grade 3/4
Grade 3/4 infection	–	22	–	24	–	34	–	10

*Premeds included 10 mg dexamethasone; hospitalization 48 hr, dose 1 only.
 †Premeds included 36 mg dexamethasone; hospitalization 24 hr, dose 1 only.

Jagannath S et al. *Blood*. 2023. Abstract 4746.

24

Expected Toxicities With BCMA-Directed Bispecific Antibodies

Cytokine release syndrome (CRS)

Infections

Cytopenias

Neurotoxicity (ICANS)

ICANS, immune effector cell-associated neurotoxicity syndrome

25

CRS Severity Is Typically Mild: Early Recognition and Treatment Is Key

RESPIRATORY

- Difficulty breathing
- Shortness of breath

HEPATIC

- Altered liver function tests in the blood

RENAL

- ↑ Serum creatinine
- Renal insufficiency

HEMATOLOGIC

- Anemia
- Thrombocytopenia
- Neutropenia

CONSTITUTIONAL

- Fever
- Fatigue
- Headache

NEUROLOGIC

- Tremors
- Altered wakefulness
- Difficulty speaking

CARDIOVASCULAR

- Rapid heart rate
- Low blood pressure
- Arrhythmias

GASTROINTESTINAL

- Nausea
- Vomiting
- Diarrhea

MUSCULOSKELETAL

- Weakness

Mitigation and monitoring for CRS

- Step-up dosing with hospitalization for monitoring
- Frequent vital signs
- Rule out infection
- Laboratory monitoring
- Early intervention with tocilizumab

ALP, alkaline phosphatase; CPK, creatine phosphokinase; CRP, C-reactive protein; CRS, cytokine release syndrome; LDH, lactate dehydrogenase; O₂, oxygen; TLS, tumor lysis syndrome
 Oluwole OO, Davila ML. *J Leukoc Biol.* 2016;100:1265. June CH, et al. *Science.* 2018;359:1361. Brudno JN, Kochenderfer JN. *Blood.* 2016;127(26):3321. 26

Infection Prevention

Avoid
crowds

Ensure
handwashing,
hygiene

Growth
factors

IVIg for hypo-
gammaglobulinemia

Immunizations
(no live vaccines)

COVID-19
prevention

Zoster and PJP
prophylaxis

Monitor CD4 count

IVIg, intravenous immunoglobulin; PJP, *Pneumocystis jirovecii* pneumonia

27

Key Points

- Approved BCMA bispecifics offer patients expanded access to BCMA therapy because of the “off-the-shelf” nature of treatment
 - Tecvayli
 - Elrexfio
- Differentiating factors between BCMA bispecifics include
 - Route of administration
 - Step-up dosing schedule, hospitalization requirements, dosing frequency
- Infection management: use preventive strategies, treat accordingly
- Ongoing clinical trials continue to evaluate newer BCMA-directed bispecific antibodies

28

Non-BCMA-Directed Bispecific Antibodies

Gurbakhash Kaur, MD

UT Southwestern Medical Center
Dallas, Texas

29

Talvey in Patients With RRMM: Response

Phase 1/2 study (MonumenTAL-1) in RRMM

288 patients—with or without prior T-cell-redirecting therapies—received treatment with Talvey at 2 different doses (0.4 mg/kg every week and 0.8 mg/kg every other week) subcutaneously.

Now approved for patients with relapsed or refractory multiple myeloma who have received at least four prior lines of therapy, including a PI, an IMiD, and an anti-CD38 monoclonal antibody!

IMiD, immunomodulatory drug; PI, proteasome inhibitor
Schinke CD et al. *J Clin Oncol.* 2023;41. Abstract 8036.

30

Talvey in Patients With RRMM: Adverse Events

Most frequent adverse events, %	0.4 mg/kg		0.8 mg/kg	
	Any grade	Grade 3/4	Any grade	Grade 3/4
Hematologic				
Anemia	44.8	31.5	45.5	27.6
Neutropenia	35.0	30.8	28.3	22.1
Thrombocytopenia	27.3	20.3	29.7	18.6
Non-hematologic				
CRS	79.0	2.1	74.5	0.7
Taste disorder (dysgeusia)*	72.0	NA	71.0	NA
Infections	58.7	19.6	66.2	14.5
Skin related*	55.9	0	73.1	0.7
Nail related	54.5	0	53.8	0
Weight decreased	41.3	2.1	41.4	5.5
Fatigue	24.5	3.5	27.6	0.7

*Taste- and skin-related side effects led to discontinuations in 5 patients

Schinke CD et al. *J Clin Oncol*. 2023;41. Abstract 8036.

31

Talvey in Patients With RRMM: Efficacy in TAL-Responsive, Dose-Reduction Cohorts

- Talvey dose reduction typically occurred after achieving a response
- Median time to dose reduction following response:
 - QW 3.2 mo, Q2W 4.5 mo, prior TCR 4.7 mo
- Response maintained following prospective dose reduction, with some patients achieving deepening responses:
 - ORR: 79.2%; sCR: 25%; CR: 29.2%; VGPR: 20.8%; PR: 4.2%

Outcome	Responders with dose reduction		
	QW* (n=24)	Q2W† (n=13)	Prior TCR‡ (n=10)
Median follow-up, mo	27.6	20.8	21.3
Median DoR, mo	19.8	NE	24.2
12-mo DoR, %	78.3	84.6	100

*Dose reduction for AE (n=21), dose reduction for response only (n=3); †Dose reduction for AE (n=11), dose reduction for response only (n=2); ‡Dose reduction for AE (n=9), dose reduction for response only (n=1).

Chari A et al. *Blood*. 2023;142. Abstract 1010.

32

Talvey in Patients With RRMM: Safety in Prospective Dose-Reduction Cohorts

Patients, %	Change in AE status in prospective dose-reduction cohorts after switch vs matched nonswitch cohort							
	Resolved		Improved but not resolved		No change		Worsened	
	Prospective	Without DR	Prospective	Without DR	Prospective	Without DR	Prospective	Without DR
Skin toxicity (rash)	66.7	41.2	0	0	33.3	58.8	0	0
Skin toxicity (nonrash)	50.0	15.3	0	4.7	50.0	74.1	0	5.9
Oral toxicity	33.3	26.9	6.7	3.1	60.0	66.9	0	3.1
Nail toxicity	11.1	12.0	11.1	3.3	77.8	81.5	0	3.3
Weight loss	12.5	18.9	12.5	6.5	37.5	53.8	37.3	20.8

- Most GPRC5D-related AEs trended toward improvement or resolution, except for weight loss

Patient numbers: skin toxicity (rash): prospective, n=3; no dose reduction, n=17. Skin toxicity (nonrash): prospective, n=6; no dose reduction, n=85. Oral toxicity: prospective, n=15; no dose reduction, n=160. Nail toxicity: prospective, n=9; no dose reduction, n=92. Weight loss: prospective, n=8; no dose reduction, n=106. Chari A et al. *Blood*. 2023;142. Abstract 1010.

33

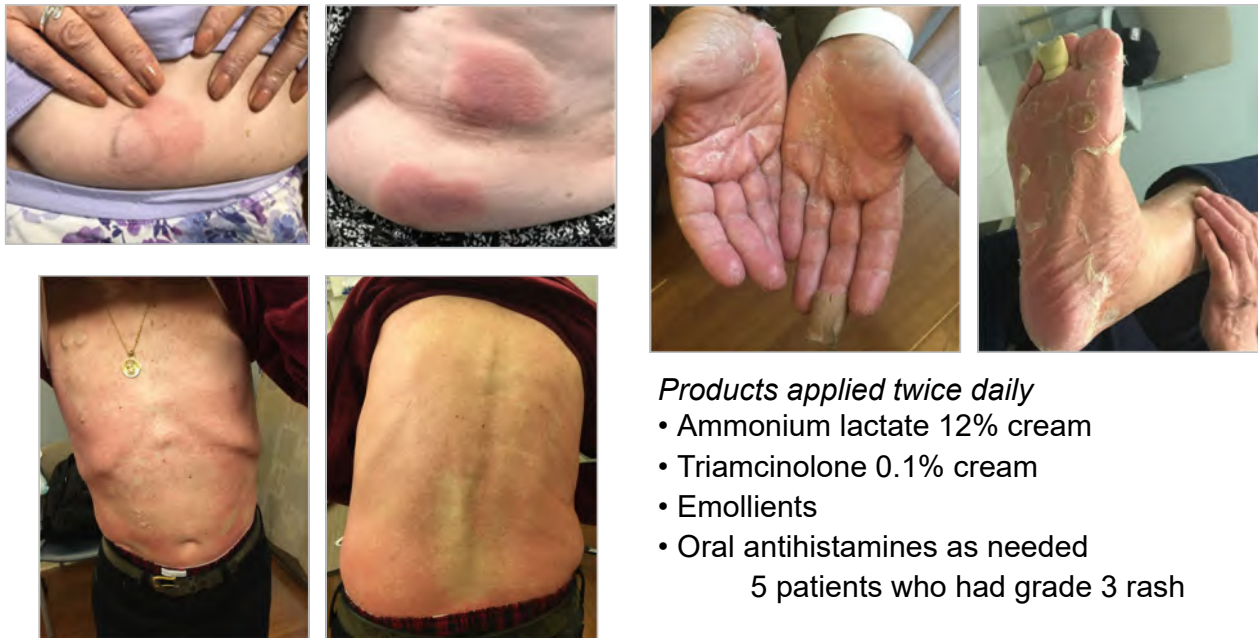

GPRC5D-Associated Side Effects

Affected area	Symptoms and effects	Management
Skin	Rash, skin peeling	Relatively benign, not painful, self-limiting, and manageable with emollients
Nails	Nail thinning and loss	Mostly aesthetic but take time to resolve
Oral	Difficulty swallowing, dry mouth, taste changes	Can lead to weight loss; have longer duration and can affect quality of life. Most successfully managed with dose modification. Supportive measures may be used (eg, NaCl mouth rinse, artificial saliva spray, diet modification)

Myeloma patients respond well to treatment, and GPRC5D-associated side effects improve over time, becoming more tolerable; notable reduction in side effects is seen with dose modification.

Catamero D et al. *Clin Lymphoma Myeloma Leuk*. 2023;23. Abstract NSP-03.

34

- Products applied twice daily*
- Ammonium lactate 12% cream
 - Triamcinolone 0.1% cream
 - Emollients
 - Oral antihistamines as needed
- 5 patients who had grade 3 rash

Images courtesy of Dr. Ajay Chari.

35

- Starts ~C2, lasts for months
- Avoid frequent/long durations of water immersion
- Frequent application of emollients (Vaseline, Aquaphor)
- Vitamin E oil
- File to smooth the edges and corners of the nail plates
- Clear nail polish or nail hardeners
- Biotin supplements may be helpful

Images courtesy of Dr. Ajay Chari.

36

Talvey Use in Practice

Administered subcutaneously according to step-up dosing schedule and then weekly or every 2 weeks thereafter

Patients are hospitalized for 48 hours for monitoring of side effects after they have completed their step-up dosing at a REMS-certified facility

REMS, risk evaluation and mitigation strategy

37

Talvey Combinations: Tecvayli + Talvey in Patients With RRMM

Most frequent adverse events (%)	All dose levels (n=93)		Tec + Tal at RP2R dose levels (n=34)	
	Any grade	Grade 3/4	Any grade	Grade 3/4
Hematologic				
Neutropenia	65.6	61.3	55.9	44.1
Anemia	50.5	34.4	32.4	23.5
Thrombocytopenia	43.0	29.0	32.4	23.5
Non-hematologic				
CRS	76.3	3.2	73.5	0
Dysgeusia	61.3	–	47.1	–
Pyrexia	50.5	2.2	38.2	2.9
Skin toxicity	53.8	0	52.9	0
Nail disorders	46.2	0	41.2	0

Progression-free survival, 20.9 months; duration of response, not yet evaluable.

PR, partial response; VGPR, very good partial response; CR, complete response; sCR, stringent complete response; CRS, cytokine release syndrome; EMD, extramedullary disease
Cohen YC et al. *J Clin Oncol.* 2023;41. Abstract 8002.

38

Talvey Combinations: Talvey + Darzalex in Patients With 3 or More Prior Lines of Therapy

**Progression-free survival, 19.4 months;
duration of response, 20.3 months.**

PR, partial response; VGPR, very good partial response; CR, complete response; sCR, stringent complete response
TRIMM-2 Study. Dholaria BR et al. *J Clin Oncol.* 2023;41. Abstract 8003.

39

Future Direction With Talvey

- Phase 2 pilot study of Talvey + Darzalex and Tecvayli + Darzalex in patients with high-risk* newly diagnosed multiple myeloma, with an early rescue intervention guided by minimal residual disease (MRD) assessment (GEM-TECTAL)

*One or more of the following high-risk features: del(17p), t(4;14), t(14;16), or 1q amplifications detected by fluorescence in situ hybridization, Revised ISS stage 3, and presence of extramedullary disease.

Rodríguez-Otero P et al. *Clin Lymphoma Myeloma Leuk.* 2023;23. Abstract NSP-03.

40

Forimtamig: A GPRC5D × CD3 Bispecific Antibody in Patients With RRMM

Subgroup analysis ²	Number of patients	Overall response rate (%)
Age ≥65 years	52	71.2
>4 Prior lines of therapy	49	63.3
Triple-class refractory	81	60.5
Penta-drug refractory	45	57.8
Prior BCMA-targeted therapy	29	51.2
Antibody-drug conjugate	19	47.7
Bispecific antibody	5	42.9
CAR T cells	5	66.7
High risk cytogenetics (include del(17p), t(4;14), t(14;16))	33	63.4
1q21 gain	15	86.7
ISS III	24	70.8

42

Fixed-Duration Therapy With Cevostamab

Lesokhin AM et al. *Blood*. 2022;140. Abstract 1924.

43

Pretreatment With Tocilizumab Reduces Incidence and Severity of Cytokine Release Syndrome With Cevostamab

Phase 1 study evaluating the use of tocilizumab (an IL-6 antibody) prior to the first dose of cevostamab.

Significantly lower rate of CRS in patients pretreated with tocilizumab

Patients pretreated with tocilizumab had no negative impact on response rates

Trudel S et al. *Blood*; 2022;140. Abstract 567.

44

Cevostamab Combinations: Cevostamab + Pomalyst + Dexamethasone in RRMM

Phase 1b study (CAMMA 1) in RRMM (≥2 prior lines of therapy, including ≥1 IMiD and ≥1 proteasome inhibitor)

8 patients received treatment with cevostamab (intravenously), Pomalyst, and dex.

	Cevostamab-Pom-Dex (n=8)
Overall response rate, n	8 (100%)
CR	1 (12.5%)
VGPR	3 (37.5%)
PR	4 (50%)
Adverse events (grade 3/4), n	7 (87.5%)
Neutropenia	Gr 3: 1 (12.5%) Gr 4: 3 (37.5%)
CRS	All Gr: 7 (87.5%) Gr 3: 2 (25%)

Jelinek T et al. *Clin Lymphoma Myeloma Leuk.* 2023;23. Abstract P-019.

45

Cevostamab Consolidation Post-CAR T-Cell Therapy

Phase 2 investigator-initiated study

8 cycles of cevostamab starting 8 weeks to 10 weeks after commercial CAR T-cell infusion (Exclusion criteria include significant immune-related events associated with CAR T cells)

Key inclusion criteria

- RRMM, ≥ 4 prior lines
- Triple-class exposed
- ≥ SD after CAR T
- ECOG PS 0-1

Primary end point

MRD-negative CR rate at 12 mo post-CAR T

Accrual began in July 2023 for planned 26 patients

Bx, bone marrow biopsy; C, cycle; Cy, cyclophosphamide; D, day; ECOG PS, Eastern Cooperative Oncology Group performance status; Flu, fludarabine; PBMC, peripheral blood mononuclear cells; SD, stable disease; SOC, standard of care
Cohen AD et al. *Blood.* 2023;142. Abstract 3389.

46

Key Points

- Bispecific antibodies are very active even in heavily pretreated patients.
- Side effects of bispecific antibodies include cytokine release syndrome, low blood counts, and confusion (rare)—all of which are treatable.
- Infections have emerged as a more challenging toxicity, but—with experience—strategies are forming to mitigate the risks.
- Bispecific antibodies represent an off-the-shelf immunotherapy; three bispecific antibodies have been approved since October 2022.
- Several additional bispecific antibodies are under clinical evaluation. Different bispecifics and different targets are on the way.

MMRF MULTIPLE MYELOMA Research Foundation

MMRF Patient Navigation Center

You and your care team will have many decisions to make along your treatment journey. The Patient Navigation Center is a space for multiple myeloma patients and their caregivers to connect with patient navigators – who are professionals specializing in oncology – for guidance, information, and support. You can connect with a patient navigator via phone, or email. Whatever questions you may have, our patient navigators are here to help.

MMRF Patient Navigators include:

- Grace Allison, RN, BSN, OCN, RN-BC
- Brittany Kurlmann, RN-BSN
- Erin Munsch, RN-BSN, OCN

THE RIGHT TRACK

Get on the right track for you

The MMRF's Right Track program puts you on the path to the best results for you.

<p>Right Team</p> <p>Access experts and centers that have extensive experience treating multiple myeloma.</p>	<p>Right Tests</p> <p>Get the information, tests, and precise diagnoses to make the right treatment decisions.</p>	<p>Right Treatment</p> <p>Work with your team to consider the best treatment plan and identify clinical trials that are right for you.</p>

Myeloma Mentors® allows patients and caregivers the opportunity to connect with trained mentors. This is a phone-based program offering an opportunity for a patient and/or caregiver to connect one-on-one with a trained patient and/or caregiver mentor to share his or her patient journeys and experiences.

No matter what your disease state—smoldering, newly diagnosed, or relapsed/refractory—our mentors have insights and information that can be beneficial to both patients and their caregivers.

**Contact the Patient Navigation Center at 888-841-6673
to be connected to a Myeloma Mentor or to learn more.**

Need help with travel to a clinical study?

- The MMRF has partnered with the Lazarex Cancer Foundation to help provide more equitable access to clinical studies for multiple myeloma patients
- This partnership is one facet of the MMRF's commitment to improve diversity and representation in myeloma clinical studies
- MMRF has provided \$100,000 over 2 years to Lazarex to fund travel, lodging, and food for patients (and a travel companion) so that they can participate in clinical studies that are appropriate for them
- Patients are funded according to income guidelines and will be reimbursed for allowed expenses
- For more information on this program and to be connected with Lazarex, call our Patient Navigation Center at 1-888-841-6673
